Practical - 10

1. You are about to design a student information screen in Flutter that collects information regarding accommodation purposes. The screen contains the following details.

- Two text form fields that represents username and password have the following:
  - ➢ Username text field has a hint text "Username".
  - ➢ Username text field has the label Username".
  - ➢ Username text field has an icon face representing it.
  - ➢ Password text field has the hint text 'Password.
  - ➢ Password text field has the label Password.
  - ➢ Password text field has an icon password representing it.
  - ➢ Password text field is obscure text.
  - ➢ The border style is circular with size 10 for both username and password.
- Radio button to check if the student has a Laptop or not.
- A drop-down list that checks if the student is (IS). Submit button (Elevated button) to send information to the server.
- Add a "Clear" button next to the "Submit" button to allow users to reset the form fields if they want to make changes before submission.

Special requirements

- ➢ Color of the screen is amber.
- ➢ Apply validation for username (Must not be empty).
- ➢ Apply validation for password (must not be less than eight characters).
- Include a checkbox for students to indicate if they have any specific accommodation requests. If the checkbox is selected, display an additional text field for them to describe their accommodation needs
- When the user clicks the submit button a message shows all details filled in the bottom of the screen. The message will be similar to

"Your username is …….. You do/don't have Laptop

You are a IS student at UCSC"

2. Imagine you are tasked with creating a basic to-do list app in Flutter. The app should have the following features:

➢ Display a list of tasks on the screen, with each task showing its title and a checkbox.

➢ Users should be able to add a new task by typing it into a text input field and pressing an "Add" button.

➢ When a user taps the checkbox next to a task, it should be marked as completed and visually different from uncompleted tasks (e.g., strike through the text).

➢ Users should also have the option to delete a task by pressing a "Delete" button next to each task.

➢ Implement a "Clear All" button that deletes all tasks from the list.
